

## **REACH Implementation - Telene's plan**

**Registration, Evaluation, Authorization and restriction of CHemicals**

### **Pre-registration launch**

The REACH process is now launched; the pre-registration of phase-in substances began on June 1, and will close in November 30, 2008. TELENE SAS has now finalized its pre-registration & registration strategy, with the support of RIMTEC, ZEON Europe, and external consulting cabinets.

After the end of needed data-gathering, the pre-registration process will be realized during July, on the ECHA (European CHemicals Agency) IT tool "REACH-IT".

Concerning our customers, who are our "downstream users", they can be exempted of pre-registration & registration, if they officially communicate via TELENE SAS, their use of our product. This will be included in our registration dossier. We are currently working on an information form, to allow this transfer of data. This form will be soon available for download from our website. It will be finalized after the publication of the RIP 3.2 "Guidance on Information Requirements & Chemical Safety Assessment", which will provide more details on information needed. (Publication was planned in May 2008)
